

## Camp Belknap

### COVID Vaccination Policy

*Updated 6/9/22*

- **Campers and staff 12 year old or older** are required to be [up-to-date](#) vaccinated for COVID. This means if it has been 5 months since primary series a booster is required.
- **Campers age 8-11** are required to have COVID primary vaccine series (2 injections) and are highly encouraged to be up-to-date including booster but not required because the CDC issued the guidance so close to camp. However, if your child is more than five months past dose two by the first day of his camp session, and **you choose not to boost his immunity with a third dose, he will not be considered up to date vaccinated.**

#### Timing of vaccinations

- Primary vaccine series (first two injections) must be completed 14 days prior to camp to be considered.
- Booster (5 months after primary series) can occur all the way up to the day prior to camp.

#### Positive Test in a Cabin - Camper

- The camper who tests positive will isolate until they are picked up. Camper must return home for isolation.
- Campers in the cabin (close contacts) who are not up to date vaccinated will need to quarantine at home.
- Campers in that cabin who are up to date, or had primary vaccine series and had a confirmed case of COVID within the last 90 days, will be allowed to stay at camp and continue participation in camp programming. Please note, there must be documentation confirming positive COVID within 90 days of camp session (physician, school nurse, test result) in the CampDoc medical record.

#### Inter-camp competition as relates to vaccination

- As of June 6, 2022 the inter-camp league has updated policies for participation. Only campers who are up-to-date or had primary vaccine series and a confirmed case of COVID within the last 90 days, may participate in inter-camp competitions with other camps. Campers who do not meet this criteria (including the few campers who are medically exempt) cannot participate in inter-camp sports competitions with other camps.
